

Introducing E.A.R.'s new Sleep Plugs Plus™

Not Just for Sleeping, E.A.R.'s New Sleep Plugs Plus Low-Profile Multi-Functional Custom Noise Plugs™ are Available in Solid or Filtered Styles

Custom ear plugs made to fit your specific ear canal are the industry standard to maximize comfort, effective noise reduction, and ease of use. Unlike generic foam plugs, they are comfortable to wear for long periods of time. Made from super soft medical grade silicone, people say "I forget I'm wearing them!"

The low-profile design features a removal tab that is below the level of the outer ear so that even side-sleepers (40% of the population!) will be comfortable while wearing them.

Lower frequencies like snoring are reduced to the level of white noise while still allowing high frequency noises like alarms and baby cries to reach the ear — perfect for sleep, studying, and meditation.

A **filtered option** reduces loud noise while allowing more sound to enter the ear canal. Ideal for noisy environments where the user may want some noise reduction with more situational awareness, like sporting events, restaurants, and concerts.

The filtered option allows more sound to enter the ear canal, for situations where the user may want some noise reduction with more situational awareness

A low profile and a soft material make the Sleep Plug Plus™ comfortable for sleeping, even when lying on your side — you'll forget you're wearing them!

Noise Reduction Rating	31 DECIBELS Without Filter	19 DECIBELS With Filter
	WHEN USED AS DIRECTED	
The range of noise reduction ratings for hearing protectors is approximately 0-30. Higher numbers denote greater effectiveness.
