

The reviews are in from our U.S. soldiers wearing HearDefenders-DF™. Overall response: "Excellent!"

"The guys and gals love them! I have provided them to those that are on convoys on a regular basis. Normal earplugs attenuate too much and you can't hear any communication. With HearDefenders-DF, you can hear everything and know that if we get hit by an IED, our hearing will be intact. This is critical – instead of having a temporary hearing loss after an explosion, we have our hearing intact, allowing us to use our radios to call for help." – D.S., Safety Manager, Army Corps of Engineers

HearDefenders-DF™ dual-filtered hearing protectors feature VARIABLE ATTENUATION. As noise levels go up, noise suppression goes up, allowing speech and radio communications to be heard!

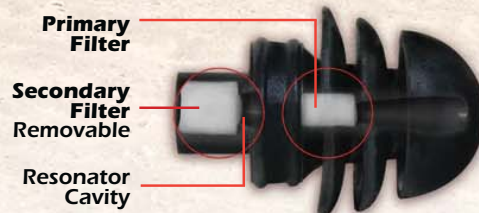

HEARDEFENDERS-DF™

DUAL FILTER by E.A.R., Inc.

- Advanced filter technology improves speech and radio communication without distortion or muffling
- Use with one or two filters
- External filter is removable
- Fit comfortably under helmets
- Floatable, moisture resistant
